A
B
$m = 1$ or 2
$m = 4$ or 8
$m = 16$ or 64
$5.2/\zeta$
IQR $= \theta$
IQR of $\hat{\theta}$ (true $\theta = 1$)
combined signal-to-noise ratio ζ
$\theta = 1$, keep $0 < \hat{h} < 1$
$\kappa = 0$, keep $0 < \hat{h} < 1$
$\kappa = 0$, all estimates
median $\hat{\theta}$
gap signal-to-noise ratio z_0 $(m = 8)$
